June

01 I: you like the science subject but you don't like astronomy? 02 P: no 03 I: why? 04 P: well I would love to go up into space but it is so much preparation to o that so if there is in the future someway to go up into space with out all those 05 I: physical training 06 P: tasks yeah. It is too much I think but if you could just shot up there I would love to go 07 I: then you would do that 08 P: yeah 09 I: ok, so how about this one because nurse is also related to science and to mind help but you don't like it? 11 P: I think that if you are going to be a nurse then I would rather just go full through to being a doctor because there seems to be a lot of nurses but I don't know I feel like there is not too many doctors yeah 12 I: so you would like to be unique? 13 P: yeah I like to do the challenge, go further than just being a nurse, going straight to the doctor 14 I: uhm hmm. Ok so how about number one, you like the marine biologist the most why? 15 P: well it used to be a psychiatrist but I've been thinking and we have been watching movies about like under the sea and stuff and I'd like to do that like go scuba diving and stuff. Going to all these hot places and stuff. I think it sounds really cool 16 I: so originally number one is this o	ne	
1: why? 1: why? 1: why? 1: why? 1: well I would love to go up into space but it is so much preparation to o that so if there is in the future someway to go up into space with out all those 1: physical training 1: physical training 2: then you would love to go 2: then you would do that 2: yeah 2: then you would do that 3: yeah 2: then you about this one because nurse is also related to science and to mind help but you don't like it? 2: I think that if you are going to be a nurse then I would rather just go full through to being a doctor because there seems to be a lot of nurses but I don't know I feel like there is not too many doctors yeah 2: I: so you would like to be unique? 3: P: yeah I like to do the challenge, go further than just being a nurse, going straight to the doctor 4: I: hum hmm. Ok so how about number one, you like the marine biologist the most why? 2: P: well it used to be a psychiatrist but I've been thinking and we have been watching movies about like under the sea and stuff and I'd like to do that like go scuba diving and stuff. Going to all these hot places and stuff. I think it sounds really cool 3: So originally number one is this one. You think what kinds of events ??? you change to this one? 3: P: uhm I think just being in biology has made me like think about funner things like, if you were a psychiatrist you would probably sit in an office and talk to people and stuff where marine biologists you can travel and like it just seems like much more creative and enjoyable 3: So what kind of job do you think they often do everyday? 3: P: uhm I don't know. I haven't really gone to far into that. I guess scuba dive once in a while and there needs to be research done and uhm studying different types of species under the sea 3: I: and which part you like most? 3: P: hot places? 3: P: hot places? 3: P: areas like Mexico, that would be nice to go to 4: It is ko so how about number two, cancer researcher? 3: P: I think it is like a growing thing that is happening in our	01	I: you like the science subject but you don't like astronomy?
P: well I would love to go up into space but it is so much preparation to o that so if there is in the future someway to go up into space with out all those D: I: physical training P: tasks yeah. It is too much I think but if you could just shot up there I would love to go T: then you would do that P: yeah P: yeah P: I ok, so how about this one because nurse is also related to science and to mind help but you don't like it? P: I think that if you are going to be a nurse then I would rather just go full through to being a doctor because there seems to be a lot of nurses but I don't know I feel like there is not too many doctors yeah P: yeah I like to do the challenge, go further than just being a nurse, going straight to the doctor I: uhm hmm. Ok so how about number one, you like the marine biologist the most why? P: well it used to be a psychiatrist but I've been thinking and we have been watching movies about like under the sea and stuff and I'd like to do that like go scuba diving and stuff. Going to all these hot places and stuff. I think it sounds really cool I: so originally number one is this one. You think what kinds of events ???? you change to this one? P: uhm I think just being in biology has made me like think about funner things like, if you were a psychiatrist you would probably sit in an office and talk to people and stuff where marine biologists you can travel and like it just seems like much more creative and enjoyable I: so what kind of job do you think they often do everyday? P: I think it is like a growing thing that is happening in our world today so I think it would be good to uhm research it and	23	P: areas like Mexico, that would be nice to go to
P: I think it is like a growing thing that is happening in our world today so I think it would be good to uhm research it and	24	I: ok so how about number two, cancer researcher?
see what is going on	25	
		see what is going on

26	I: do you think they would do some sort of job like biologist?
27	P: sort of because they would be studying previous event
	about the species and things like tat that and cancer patients or
	cancer researchers would be looking back at previous things
	and stuff like
28	I: why cancer?
29	P: uhm I don't know I've actually been through it so I thought
	it would be good to uhm learn about it more and like it
	happens in my family quite a bit to
30	I: oh I see
31	P: yeah so a kind of personal touch
32	I: ok so this one (Psychiatrist)is also the same reason?
33	I: yeah
34	P: you can also help people right?
35	I: yeah
36	P: ok so how about this one? You don't like police officer?
37	I: no I just think, I'm not too much into criminal things like
	that and that is also why I kind of changed my mind about
	psychiatrist because they work with, some people work with
	people, people and their minds aren't too there and stuff like
	that so I don't think I want to get involved with too much of
	that so yeah I don't really know about being a police officer.
	I think it is kind of dangerous too
38	I: so how about this one, secretary
39	P: secretary, well I don't know it is in the office like a
	psychiatrist it is in the office too and I don't really want to
	stay in an office
40	I: as you say they are also in an office. But this is your like
	and this is your dislike. Why?
41	P: I don't know, my mom is a secretary and I have gone to
	work with her and I have seen what she does and it doesn't
	seem that exciting to me so. And I don't know I don't really,
	I like getting out here a little bit and interact with more
	people. That is why I also like psychiatry because it is
	interacting with people. So whereas ???
42	I: I see ok, so have you done anything related to this one,
	biologist?
43	P: no
44	I: no, no
45	P: not really I haven't gone scuba diving before and well I
	went fishing once but I got sick so yeah
46	I: you got sick?
47	P: yeah it was a boat, like a really tinny boat and it was really
	rough so it really didn't work to well with my stomach
48	I: oh I see
49	P: but you like marine biology
50	I: yeah and I am sure they will have bigger boats
51	P: so you would not uncomfortable on a big boat ok. So do
_	

you have, how about these two? Have you done any action
related to psychologist and researcher?
I: well I haven't done anything with the researcher but I am in
psychology right now so I am learning a lot of things about
psychiatry and stuff like that and different disorders so and
then the biology right now too but nothing really, I haven't
done anything
I: so you say you are what?
P: I am in psychology, it is a class here
I: in high school?
P: yeah they offer a course
I: oh and how long you take this course?
P: it started in September and it ends when this class ends
I: February ok
P: so you learn a lot from this course?
I: yeah it is really informative you learn a lot of things about
the mind and stuff all these disorders and things that cause it
that you didn't know before so I think I am learning quite a
bit from that class
And you think what kind of job they will do in their
everyday?
P: uhm I guess it depends what kind of psychiatrist you are.
If you are working with families or if you are workingif
you are a criminologist, a little bit more with the criminal
things like that. But I think they are sort of a combination of
like a counsellor and a psychologist and a bit of a doctor
I: so which part you like better? To be a psychiatrist
P: uhm I like the helping part, helping people and making
them better yeah

Mandy

66	P: so number two, doctors without borders because I'm really interested in medicine kind of the whole chemistry biology side of it and if I became a doctor I would have lots of the education about that, I get to take lots of those courses and then doctors without borders is I'm really interested in travel as well and that includes both. And being able to help others that might not be able to get the help.
67	I: hm hmm wow good, so number three is
68	P: specialized doctor, it is more just uhm you could focus in on one thing and you could really kind
	of master that and be able to open something, I'm not sure exactly what the would be yet, but
	something more specialized not like a clinical doctor
69	I: so do you discuss this with your friends or family before?
70	P: yeah I have
71	I: and they support you to be this one?
72	P: yup
73	I: wow great.
74	P: so how about this one (world health organization)?
75	I: WHO, I haven't learned too much about this one, I started looking into it a little bit. The world
	health organization, I guess it is an organization that is part of the UN and they work on disease

	control and planning for how to control the disease as well as uhm just any health related issue
	world wide. So that is almost kind of almost like doctors without borders because you are not
7.0	restricted to just your one area, it is kind of the world
76	I: uhm hmm so is it a doctor or a researcher?
77	P: I'm not exactly sure. I guess there is a lot of this to it, kind of research and also the doctors that
	would travel with the UN so. I have to find out more still but I thought that was something that
70	interested me
78	I: Ok so this one (Disease research/control) would be researcher right?
79	P: yeah that would be more research. That is what kind of first got me interested in biology was
	medicine and research. But then I thought about how it would be almost tedious day after day to be
0.0	doing the same things and not always getting anywhere so
80	I: how do you know that?
81	P: I don't, I don't really. I don't know I guess it is just more an assumption in a way that is why it is
92	on the possible list because I haven't ruled it off I. So you shanging your mind to be a dector?
82	I: So you changing your mind to be a doctor?
83	P: I'm not sure, more so leaning towards doctor than research cause I like working with people and
	this is, as a doctor you are uhm more hands on than research. It is more like, with groups and stuff as well, working with others
84	I: so you say the doctor deal with people but researcher deal with something like material
85	P: usually, they have their group, they are still working with people, but medical is more, a lot of
65	different people
86	I: Variety ok good. So how about this one, math?
87	P: math related career it is just more interested in math. I'm not exactly sure maybe I guess
07	engineering would be in there but I haven't really looked into that, I don't know that much about it.
88	I: and which one you know more well?
89	P: uhm I would have to say I know marine biology quite well because I worked, I worked with
0)	researchers during the summer at Bamfield. We did research and projects there.
90	I: uhm but now you don't like it? Because the experience there?
91	P: well I had a really good time there, I would go back and I would do the whole forum again but
, -	just as a long term kind of job, marine biology, I like the research I liked that side and kind of the
	individual projects that you got to decide on but just marine biology itself wasn't my thing
92	I: so why not because you have fun there but you don't want it to be a career
93	P: yeah uhm I guess I am more interested in things that affect humans rather than kind of the
	marine animals. It's I kind of like the larger scale, like the actual visual impact rather than just
	researching and knowing everything about crabs. But I guess to me it is more affective or I'd feel
	like I was doing more if I was learning about diseases so I could help people rather than just crabs
94	I: so you mean help people is more
95	P: yeah to mehelping people is more what I would like to do, having an impact and knowing that I
	am doing something
96	I: mmm good. So how about this one?
97	P: uhm I used to be interested in speech pathology so working with people, forming words but I
	don't know really that much about it other than that
98	I: but hey originally you want to be this one?
99	P: uhm you say you used to? It mean now you don't? right? Or?
100	I: uhm I've never really had a specific job that I've wanted to do. Like some people they always
	knew, they always knew they wanted to be a fireman, they always wanted to do this and I have
	always just kept my options open [uhm hmm] so I never really looked into actually that many things
	and I guess now I am kind of seeing more variety so I can't narrow any thing off. It is still on the

	list maybe but I just don't know enough about it. Uhm yeah and I think my dad first recommended
	or talked to me about that
101	I: oh he recommend you to be this one?
102	P: or just mentioned it as something to look into
103	I: why this one?
104	P: uhm he took a course, I know I think at UVic actually he did some speech pathology and stuff
	and he was interested in it so. He didn't follow through with it but it was just kind of a course of
	interest. yeah and then working with the hearing impaired uhm I have always been fascinated with
	sign language. I don't know it. I can do the alphabet and that is about it but uhm yeah just being
	able to help someone in that way.
