

A: ok great so now could you briefly explain why you put name for the group?

B: ok well all of these are related to medical or health, like in a hospital or working with people on health related things. This math related career is math. Here they are more specialized like this is working with ears and this is more the mouth.

A: okay

B: Uhm then over here labor and environment, agriculture and farming. Agriculture could not just be labor but it is also more the environment. Sustainable farming, different things like that. Secretary is a desk job and I'm not the type of person to just sit at a desk working at the computer all day

A: uhm hmm

B: I called these part time jobs cause these are to me the types of jobs people would have earning money but not as a career.

A: uhm hmm

B: Then education is teaching, that is law and those three are kind of biologically related

A: so you don't like biology?

B: no I do but just not that, like I have biology over here too. So I guess it is more to just those specific things in biology don't really interest me. So like animals I don't, like I like animals but I don't know if I could dissect them stuff like this a lot. I still did the frog...

A: you did a good job

B: I didn't want to do it though. At first I was kind of I don't know I like frogs and ...

A: do you have to do dissection for ??? people?

B: if it is for helping them, yeah I guess. But this is like, I dissected the porpoise last year and it was, we were dissecting it to find the cause of death. I'm fine with that I'm just don't really like dissecting them when they are killed for us to dissect

A: hmm I see

B: it is more of a moral thing there

A: ok so how about now number one you most want to be a medical something?

B: yeah a medical something, I guess that was really generic so easy to put as number one

A: ok

B: so number two, doctors without borders because I'm really interested in medicine kind of the whole chemistry biology side of it and if I became a doctor I would have lots of the education about that, I get to take lots of those courses and then doctors without borders is I'm really interested in travel as well and that includes both. And being able to help others that might not be able to get the help.

A: hm hmm wow good, so number three is ...

B: specialized doctor, it is more just uhm you could focus in on one thing and you could really kind of master that and be able to open something, I'm not sure exactly what the would be yet, but something more specialized not like a clinical doctor

A: so do you discuss this with your friends or family before?

B: yeah I have

A: and they support you to be this one?

B: yup

A: wow great. so how about this one (world health organization)?
