

Medical Physics programming project in Python

- Does Medical Physics sound appealing to you?
- Are you interested in gaining physics research experience?
- Do you have some knowledge of the Python Programming Language?
- Are you interested in learning about x-ray computed tomography?
- Would you like to find out how radiation therapy is delivered to mice?
- Most importantly, though, would you like to be featured on the cool [XCITE Lab website](#)?

If you answered yes to at least four out of the six questions, let me know, because I have a short (about one month, depending on your abilities) project for you! It comes with a little bit of funding (\$1,500) and at times helpful supervisor.
